# Process Guidance

Process Guidance for running the 'XSL Transform with Schema' Model Pattern

Process Guidance for running the 'XSL Transform with Schema' Model Pattern

Setup

- [ ] The XML Transform with Schema diagram is open
- [ ] The diagram contains an input document 'input.xml'
- [ ] The diagram contains an XSL style sheet 'stylesheet.xsl'
- [ ] The diagram contains an <xmlTransform> artifact 'transform'
- [ ] The diagram contains an <OutputArtifact> artifact 'output.xml'
- [ ] The diagram contains a schema artifact 'schema'

Review the Sample

- [ ] The left swimlane shows the input and style sheet are stored in the model
- [ ] The right swimlane shows the output and schema are file system documents

Run the Transform

- [ ] The transform artifact is selected
- [ ] The context menu is displayed
- [ ] The 'Run XSL Transformation' option is chosen
- [ ] The XSL editor is displayed and the transformation runs

Review Results

- [ ] The System Output Window is shown
- [ ] The result of the schema validation is displayed in the XSLT tab
- [ ] The output.xml is opened
- [ ] The output.xml contains a product named 'Romeo'
